Vertical Lifts
Vertical Carousels

Industry Buzz Words

Point-of-Use Distribution - Refers to vending type solutions that can be located close to the actual area where the inventory will be used.

Single Item Dispensing - Refers to a dispensing device where access is controlled to the exact item being issued. These are high security devices.

Medium Security Dispensing - Refers to a dispensing device that enables access to more than the item you have recorded you are removing from inventory.

User Defined Cost Center - Any area you would like to associate the issue of inventory for cost accounting purposes. For instance, a gas mask is issued to Ron Holmes who works in the paint department in work cell #5 and is currently working on tail section 765. The department, cell and job are the costs centers associated with this usage history. CribMaster tracks up to 6 cost centers.

Controlled Access Device - Refers to any device where inventory is kept and access is controlled by requiring a mandatory identification process.

Continuous Improvement - A lean manufacturing principle that describes the concept of having room to continue cost savings and operational improvement.

CM Online

CribMaster hosted from WinWare
Reduce IT Costs
Automatic Upgrades

Susan O'Weger - Inside Channel	770.419.1399 x 328

More Industry Buzz Words

Indirect Material - Refers to inventory that is used in the manufacturing or maintenance process, but does not become part of the end product. ex. tools, ppe, mro, paint, chemicals, etc.

RFID - Radio frequency identification

Consignment Transition - The transition of customer owned inventory to supplier owned inventory.

Kit - A logical grouping of inventory that each have individual bin locations.

Assembly - A logical grouping of inventory that is packaged together and have a single bin location.

Reworkable Items - Items that require sharpening or other type of reconditioning process during its life cycle.

Item Morphing - A reworkable product that leaves inventory for the rework process as one item and returns as another. ex. A 6 inch blade is reworked and comes back as a 4 inch blade.

Stock from Location - The location that orders the inventory and stocks other locations. All orders are generated from the stock from location.
