

Stratum Software

- Stratum Global RFID Software**
- ✓ Robust RFID Enterprise Software
 - ✓ Modular
 - ✓ Scalable
 - ✓ Web Based—Server & Mobile
 - ✓ Invest Incrementally
 - ✓ Integrates With Your Enterprise Systems

Introduction...

TagNet™ is a robust Enterprise RFID software solution suite that addresses all aspects of object visibility through RFID across multiple industries and business processes. TagNet is browser based, release supported RFID business application software designed without introducing unnecessary complexity to the end-user. The solution is engineered to meet the complexity and scalability requirements of large organizations while also addressing Phase I RFID solutions out of the box within a short time frame.

Software

TagNet Server - Forming the foundation of the TagNet suite, this server component provides the key reader management module that supports a multitude of physical hardware readers in a plug n' play environment. The suite enables existing applications to subscribe to (RFID tag) events with user-defined criteria integrating that tag data with multiple enterprise systems.

Additional functionality includes tag printing & commissioning, an object repository and location management modules. Enterprise object data can be imported into TagNet via simple XLS or flat files to support RFID operations. TagNet Server is a web based application that enables enterprise access by any authorized user on the network.

Mobile Applications

AssetTrack is the foundational mobile module that associates reusable RFID tags with meaningful objects such as products, assets, vehicles, employees, etc. via a hand held RFID Reader. In addition, AssetTrack provides dynamic object identification and inventory transaction functionality.

AssetTrack ATe module extends to Windows Mobile Smartphones and PDA's for event based notification of RFID events as they occur in real-time.

Physical Inventory enables auditable asset identification and formal physical count procedures via RFID. Reconciliation of inventory in a given area is completed in a fraction of time compared to line-of-sight barcode methods.

Mobile Applications (continued)

Geiger Module enables finite locating of tagged objects within a dense population of similar assets providing both visual and audible cues when the object in question is found.

Inspection Reporting is a flexible rules based workflow application that enables RFID “In the field” inspection and records maintenance of any type of asset or object via RFID.

Warehouse Tracking provides complete warehouse life cycle management including receiving, put-away, move and pick operations via RFID.

TagTrack is an integrated RFID Inventory Management solution for mobile lift trucks or similar material handling vehicles which provides real-time directed inventory operations including put-aways, picks and moves via a cab mounted touch screen workstation. Real time integration with TagNet’s location management module is standard. In addition, flexible antenna configurations enable reading of both container tags and location tags including racks, aisles, rows and dock doors.

Professional Services for the planning, installation, and on-going operation of TagNet including business consulting, project planning, RFID infrastructure and configuration, enterprise integration, user training and technical services.

Integration Adapters provide connectivity of TagNet RFID event data into your enterprise systems in either a real time or batch environment. Multiple adapters are available based upon your protocol of choice.

Value Driven Investment

We understand that economic conditions and pressures demand value driven investments. That’s why 100% of our solutions are driven by “Return on Investment” analytics. One of the major benefits of TagNet is the building block approach to implementing RFID. TagNet’s foundation modules provide the basis for future scalability throughout the organization as requirements change without the need to replace equipment that you have already invested in.

About The Danby Group

Since 1982, The Danby Group, LLP has been supplying Fortune 1000 companies with the latest in automatic identification solutions, including label printing systems and data collection systems. We pride ourselves on our knowledgeable sales and technical staff who help our new and longtime customers take advantage of the latest marking and collection technologies.

Our customers are realizing the benefits today of complete RFID enabled solutions for Closed-Loop, Asset Management and Compliance. The Danby Group delivers best-in-class RFID business solutions with a solid understanding of industry key issues, current trends and recognizing that each customer has unique needs and complex requirements. Along with Stratum Global, we provide complete implementation services including site surveys, hardware installation, enterprise integration, tags, services and education to support the total RFID solution. Regardless of your RFID initiatives, The Danby Group has a solution that can bring immediate value to most organizations. Invest incrementally – scale your RFID solution as your business needs to. The Danby Group is a certified, small, woman-owned business. **“Start Small, Think Big.”** For more information, call below or visit www.danbygroup.com
